DESCRIPTION

The COVID-19 experience has required Healthcare Organizations to reconsider and adjust how they manage and administer the delivery of their services. From an initial period of severe urgency to the continued practice of newly developed protocols, hospitals, nursing homes, ambulatory care and other providers of services are mindful that their actions can impact both the quality of care and the potential risks for patients, staff and the organization.

You will hear from a panel of three leaders of the Catholic Health Services of Long Island (CHSLI) about the operational and clinical strategies applied by their multi-service healthcare system to address the COVID-19 challenges and in particular, the work done to maintain quality practices and minimize risk within the delivery of services.
